Ohio Crop Weather

July 6, 2020

Dry Weather Returns

Hot and dry weather came back into the state causing drought stress in crops, according to Cheryl Turner, State Statistician, USDA NASS, Ohio Field Office. Topsoil moisture decreased from 69 percent adequate or surplus last week to 30 percent adequate or surplus this week. Average temperatures for the week were approximately 5 degrees above historical normals, and the entire state averaged less than 0.2 inch of precipitation. There were 6.6 days suitable for fieldwork during the week ending July 5.

Farmers applied herbicide to **soybeans**, sprayed weeds, baled hay, and harvested **wheat**. Winter wheat harvested was at 51 percent, ahead of the five-year average by 10 percentage points, boosted by the warm, dry weather. Soybeans blooming was at 27 percent, 11 percentage points ahead of the five-year average. **Alfalfa hay first cutting** reached 100 percent, 12 percentage points ahead of the five-year average. Fifty-three percent of **corn** was considered good or excellent and 66 percent of **pasture and range** was considered good or excellent compared to a five-year average of 59 percent.
